New CELTUCE—The New Vegetable

Don't miss this delicious new vegetable from China, first introduced in America last year. It should be in all gardens. The crisp green leaves make delightful salad, but the chief novelty is the thick stalk which is delightfully tasty when eaten raw or cooked. Peeled and halved it is served raw like celery stalks or in salads. When cooked for 15 minutes it becomes very tender. A savory treat for an epicure. **Price per Pkt., 15c; ¼ oz., 35c; ½ oz., 65c; 1 oz., $1.25.**

CALIFORNIA'S GIGANTIC FLORAL FLAG

The most inspiring sight this past season in the beautiful Lompoc Valley, renowned for its vast flower fields, was the Gigantic American Flag shown in our illustration. It was composed entirely of thousands upon thousands of living, growing Larkspur plants in full bloom, and measured fully three acres in size. Red and white stripes 455 feet long; ten ft. white stars in a blue field 186 by 140 feet, and a giant golden flagstaff of Calendula Chrysantha 10 ft. wide by 450 ft. in length, were boldly outlined in a 9 acre field of shimmering white.

As the tall flower spikes swayed to and fro, the flag seemed to wave gently in the breeze. Viewed from Observation Point, the sight held spectators spellbound, and for the thousands who visited Lompoc Valley in 1942 it will remain an unforgettable memory.

5 MILLION AMERICANS ARE PLANTING

Victory Vegetable GARDENS!

Plant Vegetables Now to Save Farm Labor

Transportation . . . to Help Feed Our Fighting Forces and War Workers . . . to Give Your Family Fresh, Vitamin-Rich Vegetables When Prices Will Be High

A nation-wide survey reveals that 77.4% of all home owners in America are planting a Victory Vegetable Garden in 1943!

As you know, there is a serious shortage in farm labor, in transportation of vegetables to market—just at a time when vegetables are needed most by our fighting forces and our war workers. Every Victory Garden, small or large, helps to free farm labor and transportation for other vital needs; and assures your family a plentiful supply of garden fresh vegetables at a time when prices will be highest.

Be one of the millions of patriotic Americans who this year are growing Vegetables and Vitamins for Victory!

HOW TO INCREASE PRODUCTION FROM *Your Vegetable Garden*

3 Necessary Things to do

- ✓ PROPER SEED SELECTION
- ✓ PROPER SOIL PREPARATION
- ✓ PROPER CARE OF GARDEN

GERMAIN'S *helps you with all 3*

Buy Only Fresh Seed Laboratory Tested for Germination

Vegetable garden experts agree that poor seed strain is one of the primary reasons for garden failure. In buying Germain's Seed you buy the best that can be grown to assure your success.

At our "Floravista Ranch" situated in the San Fernando Valley in Southern California, famous for its rich soil, we make thousands of tests for purity and germination.

Only the finest seed is selected . . . scrupously cleaned and graded by modern machines . . . then given rigid laboratory tests.

When you buy seeds in the colorful Germain's packet you are buying 71 years of horticulture experience. Since 1871, Germain's—California's leading horticulture experts—have been helping vegetable growers enjoy year 'round success.

GERMAIN'S *Vegetable Seeds* GERMINATE

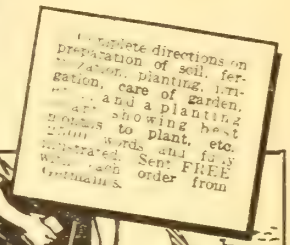
How to start Your Garden successfully

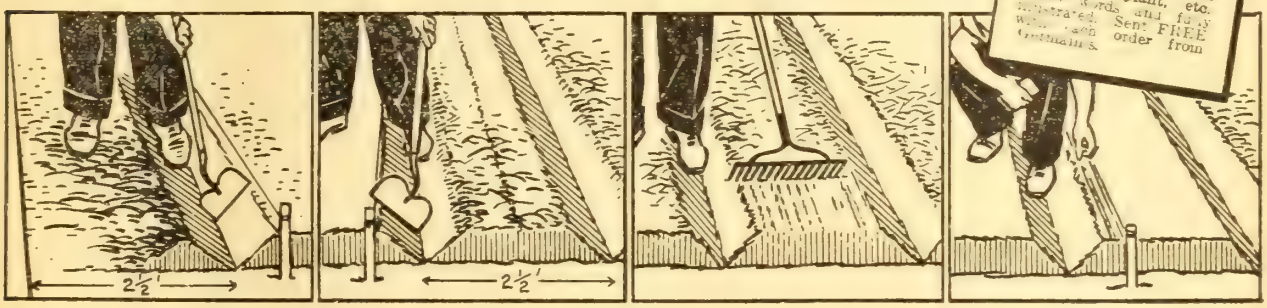
A FEW SIMPLE RULES FOR PROPER SOIL PREPARATION

The ideal seed bed is formed when the soil has been soaked to a depth of at least three feet either by rains or irrigation, spaded or plowed to a depth of 15 to 18 inches, and carefully raked or harrowed. This will store sufficient moisture in the soil to germinate the seed, bring the seedlings above the surface of the soil, and carry them on for a week or two, until they are large enough to irrigate without danger of flooding and baking the soil around them. The stored moisture supply is drawn to the surface to evaporate, and as it rises it keeps the seed zone moist. Bring about this condition and you can be assured of a successful garden planting—with reasonably good subsequent care, of course.

It is often important to use commercial fertilizer in the initial soil-improvement program, and your garden supply dealer will gladly give you the proper amounts to apply to your particular garden size.

Free Planting Guide →





HOW TO MAKE UP PLANTING BEDS WITH A HOE—Set a guide line, as in "A," and open a "furrow," drawing the soil all to one side. Then measure off thirty inches, and reset the line, opening another "furrow" as in "B," this time throwing the soil toward the first furrow. This completes one "bed." Continue to make these, level off the beds, as in "C," and planting on each "shoulder," as in "O" can then be started. It is well to irrigate after planting, particularly in summer and fall months when the soil dries out rapidly.

5 HELPFUL HINTS ON VEGETABLE GARDEN CARE

HARCO SPRAYER

1. Keep Your Garden Pest Free

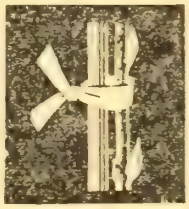
Keep on hand a supply of insecticides for insects and fungicides for diseases. A complete Spray Chart on pages 74-75.

For best spraying results we recommend Harco or Hayes Garden Hose Sprayers described on page 76A.

TRAIN-ETTS

2. Give Proper Support to Plants and Vines

Grow tomatoes, pole beans and cucumbers on a Trellis for finer, larger vegetables. It also makes picking much easier. We recommend Germaco Train-etts Netting which doesn't rot like string and is very easy to hang.



TWIST-EMS

3. Use the New Handy Plant Tie

For plants supported by stakes we recommend Germaco Twist-ems, the neat permanent plant tie, for best protection. A "twist of the wrist" and the plant is tied. Complete descriptions of this unusual product is on page 76-A.

HOTKAPS

4. Grow Earlier, Hardier Vegetables, Flowers

Do as successful market growers do. Place patented Germaco HOTKAPS—strong little hothouses—over seeds or plants when transplanting. Completely protect from destructive frosts, storms, insects—maintain perfect mulch

HAYES-ETTE

5. For Small Garden Hayes-ette Sprayer

AT LAST! A compact little bantamweight that efficiently does the work of many larger sprayers. Weighs just a little over a pound, filled. Simply attach to garden hose, lightly press the new No-Leak Thumb Button—that's all! Operates on 20 to 150-pound water pressure. Sprays all modern liquid spray materials free from soaps.

GERMAIN'S NEW GIANT AMARYLLIS

This is without question the largest and most beautiful strain of American Hybrid Amaryllis in existence. The huge flowers average over 8 inches in diameter and are composed of broad overlapping petals making broad, wide open blossoms of great beauty.

CULTURE—This amaryllis is evergreen, and requires a sunny or partially shaded place. The bulb should be planted with the top just below surface of the ground. The soil should be well spaded and adequately enriched with rotted manure or commercial fertilizer. Do not move them more often than necessary, as they thrive best when undisturbed for several seasons. They may be grown in pots very satisfactorily, making a beautiful plant for patio or porch decoration when in bloom. **Price: Each 45c; 3 bulbs for $1.20; $4.50 per dozen.**

ANEMONES
(Improved Giant French)

These are among the most showy and beautiful of spring flowers; of neat and compact growth, with elegantly cut foliage and the most brilliantly colored blossoms. Soak the roots in water for six hours previous to planting.

GERMAIN'S FIELD AND ENSILAGE CORN

Note—Prices on field corns listed below are postpaid in quantities up to and including 10 pounds. If larger quantities are desired, write us for special prices. If grown for the corn, field corn should be drilled in rows three feet apart, and two feet apart in the rows, requiring about ten pounds per acre. If grown for ensilage, the rows should not be over one foot apart, and thirty inches apart in the rows, requiring 50 to 75 pounds to the acre.

HYBRID FIELD AND ENSILAGE CORNS

Yields have averaged from 15 to 20 bushels of corn per acre over open pollinated varieties. Growers are cautioned not to attempt to save hybrid corn seed as the hybridization work must be repeated each year. We list hereunder two varieties, one recommended for ensilage and one for grain.

HYBRID ENSILAGE CORN NO. 520—This Yellow Dent Corn is an extremely heavy producer of silage. It comes in tassel in about 97 days and is ready for husking in about 110 days. **1 lb. 30c; 10 lbs. $2.50, postpaid.**

Semesan Jr. should be used to disinfect seed corn before planting, to destroy such disease germs and fungus spores as adhere to the surface coat or in some cases exist internally. Semesan Jr. possesses remarkable properties for sterilizing seeds, accelerates germination, stimulates growth, influences earlier maturity, develops sturdier plants, and increases crop yields. See page 76 for prices.

CORN—FIELD—

GERMAIN'S SORGHUMS AND SUDAN

(Write us for Quality Prices and Samples)

SACCHARINE SORGHUMS

EARLY AMBER—Furnishes most nutritive forage, which can be fed either green or cured, and will yield two or three cuttings a year, stooling out thicker each time it is cut. It grows ten to twelve feet high. Sow broadcast for forage at the rate of 5 lbs. per acre in drills 3½ to 4 ft. apart. **Price per lb. 25c; 10 lbs. $2.00, postpaid.**

HONEY SORGHUM—For ensilage and for syrup purposes. It is a fine variety for silage purposes, having slender leafy stalks, varying in height from eight to twelve feet. It is medium late maturing and has decidedly tender stalks, and is important from a forage standpoint. When the crop is to be used for fodder or silage, it is usually planted in rows 3 to 3½ feet apart, using up to 5 lbs. of seed per acre. **Price per lb. 25c; 10 lb. lots $2.00, postpaid.** Write for special prices in larger quantities.

NON-SACCHARINE SORGHUMS

DWARF MILO MAIZE—Grows to a uniform height of 4½ to 5 feet; its stalks being a mass of leaves overlapping each other and under average conditions yielding from 2 to 2½ tons of threshed grain per acre. It is drought resisting, a vigorous producer, easy to harvest and is the finest grain we know. Plant six pounds per acre in rows 3 feet apart and plant six to twelve inches apart in a row. Planting should be done in the spring, after all danger of frost is past and the ground is warm. **Price per lb. 25c; 10 lbs. $2.00, postpaid; 25 lbs. $4.00.**

DOUBLE DWARF MILO MAIZE—(Calapproved No. 38)—Similar in all its characteristics to the Dwarf Milo Maize except in height. This strain grows 2 to 2½ feet tall and therefore can be combined. We offer this year "Calapproved" seed of this variety. "Calapproved" seed is resistant to Pythium root rot and must meet rigid standards of purity in type, uniformity, and germination in order to meet the requirements of the State Department of Agriculture. **Price per lb. 25c; 10 lbs. $2.00; 25 lbs. $4.00, postpaid.**

FETERITA — An early maturing plant valued both for grain and forage. It resembles Milo in habit, except that the heads are uniformly erect, seeds bluish white in color. Sow 6 pounds to the acre. **Price per lb. 25c; 10 lbs. $2.00, postpaid.**

WHITE KAFFIR — Unsurpassed for dry alkali land, on which no better fodder and grain crops grows. A prolific member of the sorghum family, having more foliage and smaller stalks than the other varieties, and harvested very easily. Its great root system enables it to produce wonderfully in drought sections and to break up new ground for other crops. Cattle relish the stalks; the grain is a valuable food for poultry. Plant six pounds to the acre. **Price per lb. 25c; 10 lbs. $2.00, postpaid.**

HEGARI—The seed is round and white and does not shatter very readily. The heads grow very erect. It is drought resisting and stands some alkali. Plant six pounds to the acre. **Price per lb. 25c; 10 lbs. $2.00, postpaid.**

WONDER FORAGE PLANT — A very heavy yielder due to its habit of stooling. The stems are succulent and sweet. Plant five lbs. drilled, twenty lbs. broadcast, to the acre. **Price per lb. 35c; 10 lbs. $3.00.**

EGYPTIAN CORN—The grain is produced in large compact heads and the seed is flat and pure white. Plant the same as Milo Maize. **Price per lb. 25c; 10 lbs. $2.00, postpaid.**

SUDAN

SUDAN GRASS—Grows on a wide range of soils from sand to clay, and produces from four to six cuttings of highly nutritious hay per acre. As a pasture crop it is unexcelled, and succeeds where others fail. Sow 15 to 20 lbs. of seed per acre in the early spring after all danger of frost is past, and you will be assured of a bountiful supply of forage until late fall. **Price per lb. 25c; 10 lbs. $2.00, postpaid.**

SUDAN GRASS, CALAPPROVED NO. 23—We advise growers of Sudan to plant this new improved strain. Developed by the University of California, it has yielded on actual test about 20% more than ordinary Sudan, and in addition is much more uniform in its growth. This seed is grown under the "Calapproved" plan of the State Department of Agriculture, which means that it must meet the most exacting standards of type, purity, germination, and freedom from weed seeds. **Price per lb. 30c; 10 lbs. $2.50, postpaid.**

NEW HYBRID CLIVIAS

Pictured on

OUR FRONT COVER

Germain's front cover this year presents our new hybrid Clivias used as the featured planting in a beautifully landscaped shade garden on the grounds of one of Bel Air's loveliest homes.

Our superb new strain is the culmination of ten years of selective improvement. It brings you larger flowers, more intense sparkling color and broader, more handsome foliage than ever before seen in these rare plants. The flower heads, composed of numerous trumpet-shaped blossoms, are fully 7 inches across and are boldly held above the broad, shiny green, amaryllis-like foliage. Their color is a unique, intense orange red, seldom matched by any other flower.

Clivias succeed best in dense shade and thrive under overhanging trees, in secluded nooks and patios.

In California and the South they are more and more the distinctive feature of finer landscaping for shade, while in colder climates they are outstanding pot plants for the home or conservatory, bringing new color and beauty as well as a touch of rare quality to any collection of indoor plants.

Price: 5" pot size $1.45 each; 6" pot size $1.95 each; 7" pot size $2.45 each.

Lily of the Valley Bush (Francoa)

Lily of the Valley Bush

Here is a perennial flowering plant that you should put on your must list. So few cut flowers do well in the shade that this should fill a long felt want. Francoa Appendiculata Alba as this plant is botanically known bears white flowers on long stems often over three feet tall, blooms are tubular in shape and as many as one hundred florets appear on a stem. It is extra long lasting and opens in water when cut in the bud. The plentiful foliage is a pleasing shade of green. We recommend full shade and plenty of water for best results. Close to the coast plants will thrive in partial shade. The plant is hardy and will stand temperatures down to 15 degrees without injury. In colder climates a protection of strawy litter is necessary to keep the plants through winter. Flowering season starts in May and established plants will bloom continuously until frost.
